

Balkan frame

Cervical traction

Half-frame of extremities

Features

Mobilization device and change of position for patients with reduced mobility.

The Balkan frame is made of aluminium which provides resistance and lightness for use and handling.

The Pardo's Balkan frame is composed of two curved frames subject on both sides of headboard and footboard, and a central bar in longitudinal position which goes through the length of the bed.

The set comes with a triangle of traction to facilitate the mobilization of the patient avoiding the possibility of injury.

The use of Balkan frame system allows construction of all frames traction for:

- Extension
- Suspension
- Mobilization

Positioning, orthopedics, rehabilitation, rheumatology and neurology, as well as help the physically disabled.

The use of the system simplifies patient care and optimizes comfort.

Besides of the Balkan frame exists the possibility of use a half-frame of extremities and a cervical traction which are anchored in headboard and footboard zones.
